EDUCATION

Cairo University, Faculty of Engineering 2019 – 2024
B.Sc. Computer and Communication Engineering (CCE) Very Good, GPA 3.3

PROFESSIONAL EXPERIENCE

Full Stack Developer Jul 2024 – present
Center For Advancement Of Post-Graduate Studies (Cairo University Faculty of Engineering) Full-time

Development of Pollutant Inventory & Survey Project. Building the backend using a pure Java framework and the frontend using Vue.js

Full Stack Developer Jun 2024 – present
Opus Talent Analytics Inc. Part-time

Contributing to the ongoing product development by employing data analysis using SQL, JavaScript, and Flask framework

Front End Developer Aug 2022 – present
Montu Freelancer

Developed various and diverse functioning platforms using React.js and integrating RESTFUL apis

QA Engineer May 2024 – Jul 2024
Siemens Internship

Developed python scripts to automate the generation of fault simulation datasets and the training of ML and DL models contributing to graduation project

Data Analysis Engineer Jul 2023 – Sep 2024
E-Finance Internship

Was part of the Visualization & Modelling Team, worked on analyzing, visualizing, and modeling big datasets using SQL

Cyber Security Engineer Jul 2022 – Sep 2022
Vodafone Internship

Worked along the Identity and Access Management team, Integrated new features in SailPoint identityIQ and Earned Top Performer award

PROJECTS

Enhancing Fault Simulation using Machine Learning
Graduation Project ,Sponsored by Siemens
A machine learning-based fault simulation system, achieving high accuracy and securing second place in the university's Project of Excellence Competition against various academic disciplines within the university

Logic gate Simulator
A comprehensive circuit simulator built from scratch using C++, incorporating a user-friendly GUI for designing and analyzing electrical circuits

COVID-19 Database system (SQL, .NET framework)
Database that records data of hospitals, patients and services, supports different user interfaces

Automatic Image Cutout
An image processing algorithm for automatic object segmentation and background binding

Tashkeel Model
A multi-layer RNN encoder-decoder model that predicts the diacritics of an Arabic sentence

Operating System Scheduler
A C-based operating system scheduler, implementing various scheduling algorithms to simulate the operating system behaviour using a list of tasks

TECHNICAL SKILLS

C++/C# | Java | JavaScript | Python | Linux | Assembly | HTML5 | CSS3 | Vue | React | Express.js | SQL | MongoDB | .NET | Flask

ACTIVITIES

Dell Hackathon - Hacktrick 2024
Overcame complex encryption challenges, developing offensive and defensive scripts in a highly competitive environment

VMware Winter Workshop 2023
Gaining expertise in virtualization and automation technologies

Member of Algorithms team 2023
Energia Powered
A student activity club focuses on technical training and study guides, exams, and lectures to enhance academic performance

Rotary Culture Exchange Program 2017
Lithuania
Participated in the summer gliding camp
